Exploratory Data Analysis

Gender

```
In [15]: # plotting a bar chart for Gender and it's count
ax = sns.countplot(x = 'Gender', data = df)
for bars in ax.containers:
    ax.bar_label(bars)
```

```
In [16]:
         # plotting a bar chart for gender vs total amount
         sales_gen = df.groupby(['Gender'], as_index=False)['Amount'].sum().sort_values(by='Amoun
         sns.barplot(x = 'Gender',y= 'Amount' ,data = sales_gen)
```

From above graphs we can see that most of the buyers are females and even the purchasing power of females are greater than men

Age

```
In [17]: ax = sns.countplot(data = df, x = 'Age Group', hue = 'Gender')

for bars in ax.containers:
    ax.bar_label(bars)
```

```
In [18]: # Total Amount vs Age Group
sales_age = df.groupby(['Age Group'], as_index=False)['Amount'].sum().sort_values(by='Amount')
sns.barplot(x = 'Age Group', y= 'Amount', data = sales_age)
```

From above graphs we can see that most of the buyers are of age group between 26-35 yrs female

State

total number of orders from top 10 states

In [19]:

```
sales_state = df.groupby(['State'], as_index=False)['Orders'].sum().sort_values(by='Orde
           sns.set(rc={'figure.figsize':(15,5)})
           sns.barplot(data = sales_state, x = 'State',y= 'Orders')
           <Axes: xlabel='State', ylabel='Orders'>
